

FTP to SMS

What is FTP (File Transfer Protocol) to SMS?

Definition of FTP to SMS

- FTP to SMS is provided for clients who want to upload large batches of individual messages in an automated way.
- Access to the ftp server has to be specifically enabled for your account, or you will be unable to authenticate. Please contact us to enable access

FTP to SMS facility allows clients to

- Send large volumes of messages in an easy and quick manner. All you need is a list of destination mobile numbers that you wish to send the SMS message to, and you will be able to upload a text file via FTP.

How does it work?

- Login, and upload your file with any filename that you want.
- However:
 - Your filename must be unique, so that there is no chance that you will upload a second file with the same name before we have a chance to process the first.
- If fatal errors are encountered during processing (e.g. incorrect file format) or submission (e.g. you have insufficient credits), the file will be moved to the 'Error' folder.
- If no fatal errors are encountered, the file will be moved to the 'Archive' folder.
- Note that the parsing of your file will be on a best-effort basis: we will try to find as many messages as we can in your file and strip out invalid characters. Therefore, you would be well advised to validate your file properly before uploading.

Where can I use it?

- If you have a large database of all your employees cell phone numbers and would like to get an urgent message out.

Costs? (all costs incl VAT)

- R0.25 per SMS
- R1140.00 Once-off setup fee
- R570.00 per month subscription fee
